

## Call for Papers

**Climate-Driven Cancer Pathways: Microbiome, Immunity, and Translational Therapeutics****Guest Editor**

Dr Asiya Nazir, *Abu Dhabi University, United Arab Emirates*

Dr Afsheen Raza, *Abu Dhabi University, United Arab Emirates*

Dr Touseef Amna, *Al Baha University, Saudi Arabia*

Prof. Dr Eiman Aleem, *Abu Dhabi University, United Arab Emirates*

This Collection focuses on the molecular mechanisms linking climate and environmental stressors to cancer development, immune dysregulation, microbiome alterations, and disease progression. It highlights emerging therapeutic strategies, including natural products, microbial-derived compounds, immunomodulatory approaches, and translational technologies for cancer and related diseases.

**About the journal**

Discover Molecules is an open access, peer reviewed journal that publishes multidisciplinary research across all areas of molecular science, from single molecules to complex molecular systems. It

welcomes studies spanning biology, chemistry, earth science, and physics. The journal covers a broad range of topics—including molecular interfaces, self-assembly, supramolecular chemistry, polymers, catalysis, spectroscopy, and computational modeling. The journal is Indexed in DOAJ.

Associate Editor: Dr Selwin K Wu, *Springer Nature (Singapore), Singapore*

Please contact Managing Editor, Yueyin Shen, if you have any queries ([yueyin.shen@springernature.com](mailto:yueyin.shen@springernature.com))
