The 4 Ps Model for Contextualizing Research

In the realm of academic research, the 4 Ps model serves as a foundational framework that highlights crucial components essential for effective research development and impact. This model includes Publications, Public and In-house Funding, PhDs, and Presence, each playing a vital role in shaping the research landscape.

1. **Publications:** The quality and impact of research publications are essential for advancing knowledge and establishing credibility within the academic community.
2. **Public and In-house Funding :** This approach involves engaging various stakeholders in funding initiatives, enhancing collaboration and resource allocation for diverse research projects.
3. **PhDs:** The cultivation of skilled researchers through PhD programs is vital for driving innovation and maintaining high research standards.
4. **Presence:** The visibility of research efforts in national and international forums helps to foster collaborations and disseminate findings effectively.

Good quality research depends on research culture, research infrastructure, types and quality of publications, resources, research policies, strategic fit, alignment with national and international strategies, critical mass, track record, links with teaching, part of the innovation ecosystem, and academic, social, and economic impact.

Understanding the 4 Ps equips institutions to effectively structure their research strategies, ensuring meaningful contributions to both academia and society. By emphasizing these elements, researchers can cultivate a sustainable and impactful research environment.
