Some Hints on Conducting Good Research

The pillars of good research are:

- Critical Literature Review
- Theoretical Underpinning
- Research Methodology
- Data Collection and Analysis
- Validation
- Writing Style
- References

Writing a research paper for a peer-reviewed journal may seem daunting to a novice researcher. However, once a structured approach is adopted, it may not be as overwhelming as previously anticipated. Most papers follow a structure that includes: abstract, introduction, literature review, methodology, data collection and analysis, findings, discussion, limitations, conclusions, and references. Ethics should be at the heart of conducting good research.
